

Finrone Systems offer bespoke self erect panel buildings for all stages of pig production.

Buildings can be up to 14m wide with 2.7m high wall panels. Buildings can accommodate multiple rooms, different ventilation systems and we can offer a covered exterior passage.

Self erected buildings can be completed within 3 to 8 weeks depending on size and type.

We offer a wide range of flooring systems, feeders and penning etc to meet our customer requests and also offer a complete full turn key package.

SELF-ERECT BUILDINGS FOR THE PIG INDUSTRY

Finrone Systems has over 25 years experience in the construction of turnkey buildings for intensive pig breeding.

We have recently included the KIT Building to our portfolio. This gives our customers the option to construct the buildings themselves or hire local building services.

Finrone will supply a complete set of construction drawings with all buildings purchased.

If required we have fully trained staff to assist with all aspects of your construction.

- Buildings are erected on site with wall panels up to 6 meters long and 2.7 meters high which support the clear span of the roof.
- Ceilings and roof are supplied to suite different building design & ventilation systems.
- Design options available for multiple rooms and all stages of pig production.

- Finrone Systems supply interior equipment including penning systems to suit to most costumers requests.
- Manufacturing involves the used of top quality non-corrosive materials i.e. GRP, plastic & stainless steel are used extensively in construction & fit out.

- Our design team works closely with top European Suppliers to offer high quality & innovative solutions and buildings for our costumers.
- We can offer supply only, assisted assembly and complete turn key packages along with most equipment and we can usually accommodate most individual customer request.

- Multiple rooms available with a central passage constructed with a pvc wall or a bonded insulated wall.
